

CS-97 Senior Capstone — Acceptance Test

Beantown Baby Diaper Bank | Jungle Green Team: Dilanur B

#	Test ID	Description	Measured Result
Acceptance Criterion AC-1: Authorized administrators can upload diaper distribution data into the system			
1	1A	Valid file upload and ingestion Upload test spreadsheet with 14 rows; verify all rows ingested, values match source, confirmation shown, data appears in distributions table.	14/14 rows ingested. Values matched source file exactly. Confirmation message displayed. Data appeared in distributions table.
2	1B	Invalid file rejection Upload ≥ 3 files with missing columns, invalid numerics, or malformed dates.	All 3 invalid files rejected with descriptive error messages. No partial data stored.
3	1C	Latest data visible in application Upload valid spreadsheet; verify newly uploaded records appear in map and related views.	New records appeared in map view and admin table after upload.
Acceptance Criterion AC-2: Uploaded data can be reviewed and edited by authorized administrators			
4	2A	Field edit persists correctly Edit diaper count or org/city field for 10 existing records; verify persistence and visualization update.	All 10 edits saved successfully. Values persisted after page refresh. Visualization reflected updates.
5	2B	Invalid edits are blocked Attempt negative counts, blank required fields, non-numeric values in numeric fields.	All invalid edit attempts were blocked. Validation messages displayed. No invalid records committed.
Acceptance Criterion AC-3: Data management features are protected by authentication and authorization			

6	3A	Unauthenticated access is blocked Attempt to access upload, edit, and admin routes without logging in.	Redirected to login page on all protected route attempts. Admin UI elements not visible to unauthenticated users.
7	3B	General user access remains read-only Access as non-authenticated visitor; attempt data modification via interface and direct API requests.	Map, visualizations, and partner info accessible. Upload/edit features not accessible. All modification API requests rejected.
8	3C	Admin users can perform administrative data actions Log in as Admin; perform upload and edit workflows.	Admin successfully uploaded datasets and edited records. Changes saved and reflected in visualization.
9	3D	Only Super Admins can manage administrator accounts As Super Admin: create, reset, delete admin accounts. As Admin: attempt same actions.	Super Admin successfully created, reset, and deleted admin accounts. Admin user blocked from all account management features.
Acceptance Criterion AC-4: Public users can explore diaper distribution data through an interactive map and timeline controls			
10	4A	City exploration works correctly Click ≥ 10 cities with known seeded data; verify popup shows city name and correct yearly total.	Clicked 10 cities. All popups displayed city name and totals. Totals matched aggregated DB values in all cases.
11	4B	Yearly data filtering works correctly Change selected year across multiple years including current incomplete year.	Year selector updated data correctly for all years tested. Current year displayed YTD totals. No monthly breakdown shown.
12	4C	Basic usability and performance Load on desktop (1440px, 768px) and mobile (375px) viewport sizes.	Map remained interactive and readable at all three viewport widths. No layout failures or UI errors. City/partner interactions functional.

Acceptance Criterion AC-5: Users can explore partner organization information connected to the distribution data

13	5A	Partner organizations appear for a selected area Click locations with known partner associations in seeded test data.	Correct partner icons/names displayed for all tested locations. Partner association matched expected seeded data.
14	5B	Partner detail popup is complete and correct Click ≥ 10 partner icons; verify popup shows all required fields.	All 10 partner popups showed: org name, description, partnership start date, and approx babies helped/month. All values matched stored records.

Summary

Total Tests	14
Passed	14
Failed	0

Target / Tolerance	Status	Notes / Remediation Plan
Row ingestion = 100% Numeric accuracy = exact match Processing $\leq$ 3 sec for 100 rows	PASS	
100% invalid files produce error 0 invalid rows stored Error displayed $\leq$ 3 sec	PASS	
Propagation to map $\leq$ 30 sec Data in admin view $\leq$ 3 sec	PASS	
Save success = 100% (10/10) Persistence = exact match Save response $\leq$ 3 sec per record	PASS	
100% invalid edits blocked 0 invalid records in DB	PASS	

100% of attempts blocked Redirect ≤ 2 sec	PASS	
100% modification attempts rejected 0 successful writes from general users	PASS	
100% admin workflows succeed Updates visible ≤ 30 sec	PASS	
100% Super Admin actions succeed 100% Admin account mgmt attempts blocked	PASS	
100% data accuracy vs DB totals Popup latency ≤ 1 sec	PASS	
Aggregated totals = 100% accurate Visualization refresh ≤ 0.5 sec	PASS	
Page load ≤ 5 sec No layout failures at 375/768/1440 px	PASS	

Partner association = 100% accurate	PASS	
100% field completeness Data = exact match to stored records Popup display ≤ 1 sec	PASS
